

Going Airside?

Does your business involve going airside at an airport? You may only go airside once or twice a year – perhaps to make a delivery, pick-up or have a meeting with a business contact. If you go airside it is likely that your current business and vehicle insurance policies will not cover you for an incident airside or will only provide a limited amount of cover, compared to the potential exposure.

...we can help!

An airside liability scheme will cover:

- ✓ **Third party motor vehicle property damage, and/or bodily injury**
- ✓ **Third party general public and property liability.**

Cover is not restricted to UK airports or any one airport authority/operator but your business does have to be UK domiciled/registered. Cover excludes activities in the USA and Canada.

You can choose the limit you require from as little as £1,000,000 to £100,000,000 on either a 24 hours (per risk basis) or on an annual basis.

This scheme is insured with a leading international Insurance Company, authorised and regulated by the UK Financial Services Authority.

General policy conditions do apply and the scheme excludes losses arising from War and allied perils, asbestos, products liability, claims covered under the UK Road Traffic Act, noise and pollution, radioactive contamination and any incidents covered by your existing Employers Liability insurance policy.

Many airport operators now require contractors to have their own airside liability cover (or are requesting higher limits that in the past). Purchasing this insurance cover will mean that you can do business airside and protect your company at the same time.

- ✓ **Designed for contractors and individuals working in or about the airport premises but predominantly airside.**
- ✓ **Flexible limits to suit your exposures**
- ✓ **Premiums from as little as £375* (subject to underwriting criteria, Insurance Premium Tax and policy administration fees)**
- ✓ **Quotations provided with minimal paperwork and promptly**
